

BEGINNER

How to Use This Book

This toolkit is designed for a beginner who wants a structured path rather than random indicators and social-media signals. Read the learning pages, complete the exercises, use the journal, and practice on historical or simulated data before risking real money.

Core principle

The goal is not to predict every candle. The goal is to make decisions with a defined setup, controlled downside, and consistent review.

Recommended sequence

1. Learn the market basics.
2. Understand price action and market structure.
3. Learn risk management before strategy hunting.
4. Backtest one simple setup.
5. Paper trade and journal it.
6. Review statistics and improve your process.

Important

No strategy can guarantee profits. Examples in this book are educational and should not be interpreted as trade recommendations.

Disclaimer & Risk Notice

Trading and investing involve risk, and losses can occur. This material is educational and informational only. It is not investment, financial, legal, or tax advice and is not a recommendation to buy or sell any security, derivative, cryptocurrency, or other financial instrument.

Do not trade with money you need for living expenses, debt payments, emergencies, or essential obligations. Leverage and derivatives can magnify losses. Always understand the rules, fees, taxes, margin requirements, and risks of the product you trade.

The author/publisher makes no guarantee regarding results. Past performance, simulated results, examples, or hypothetical scenarios do not guarantee future performance.

Table of Contents

1. What Is Trading?
2. Market Basics
3. Accounts & Orders
4. Trading Styles
5. Candlesticks
6. Support & Resistance
7. Trend & Market Structure
8. Volume
9. Risk Management
10. Stop Loss & Targets
11. Risk-to-Reward
12. Position Sizing
13. Building a Setup
14. Trading Psychology
15. Common Mistakes
16. Trading Plan
17. Trade Walkthroughs
18. 30-Day Practice Plan
19. Trading Checklist
20. Final Roadmap

Workbook & bonuses

Risk calculator concepts • Trading journal • Candlestick cheat sheet • Support/resistance worksheet • Pre-trade checklist • 30-day challenge • 50 rules • Review templates

1. What Is Trading?

Concept

Trading is the process of buying and selling financial instruments with the objective of participating in price movements. A trader works with uncertainty: every setup can fail.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

1. What Is Trading?

Trading vs investing

Trading often focuses on shorter or medium-term price movement and execution. Investing generally emphasizes longer-term ownership and business or asset fundamentals. The distinction is about time horizon and process, not a guarantee of better returns.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

1. What Is Trading?

The beginner mindset

Start with education, observation, simulation, and risk control. A beginner's first success is not a big profit; it is following a sensible process without taking unnecessary risk.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

1. What Is Trading?

Exercise

Write why you want to learn trading, how many hours per week you can study, and what amount of money you can afford to lose without affecting essential expenses.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

2. Market Basics

Price and supply/demand

Prices move as buyers and sellers interact. The chart is a record of those transactions, not a prediction machine.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

2. Market Basics

Liquidity

Liquidity describes how easily an asset can be traded without causing a large price impact. Highly liquid markets can still move sharply during news or stress.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

2. Market Basics

Volatility

Volatility describes how much and how quickly prices change. More volatility can create opportunity and risk at the same time.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

2. Market Basics

Exercise

Choose three liquid instruments and observe them for five sessions. Record average daily range, major levels, and periods of high activity without placing trades.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

3. Accounts & Orders

Demat and trading accounts

In India, a demat account holds securities electronically and a trading account is used to place orders through a broker. Complete applicable KYC and understand broker terms.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

3. Accounts & Orders

Order types

Market orders prioritize execution; limit orders specify a maximum/minimum acceptable price; stop orders are designed to activate under defined conditions. Exact behavior varies by market and broker.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

3. Accounts & Orders

Safety

Use strong passwords, device security and multi-factor authentication where available. Never share OTPs, PINs, or login credentials.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

3. Accounts & Orders

Exercise

Open your broker's help pages and write the definition, fee, and risk of each order type you plan to use.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

4. Trading Styles

Intraday

Positions are generally opened and closed during the same trading session. It demands attention and can expose you to fast moves.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

4. Trading Styles

Swing

Positions are commonly held for days to weeks. Traders may use daily and multi-hour charts and accept overnight risk.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

4. Trading Styles

Positional

Positions can be held for weeks or months depending on the strategy and thesis.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

4. Trading Styles

Exercise

Select one style that fits your schedule. Explain why you can realistically follow it, including screen time, capital, and emotional tolerance.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

5. Candlesticks

Four prices

Each candle summarizes open, high, low, and close for a chosen period. The body compares open and close; wicks show extremes.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

5. Candlesticks

Context matters

A hammer at random is not automatically bullish. A rejection candle at a meaningful level within a defined context can be more informative.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

5. Candlesticks

Patterns

Doji, hammer, shooting star, engulfing, inside bar and morning/evening-style structures are useful descriptions, not guaranteed signals.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

5. Candlesticks

Exercise

Take 50 historical candles and label body, upper wick, lower wick, and closing direction. Then mark which candles occurred near important levels.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

6. Support & Resistance

Support

A support zone is an area where price has previously found buying interest or where declines slowed.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

6. Support & Resistance

Resistance

A resistance zone is an area where selling interest has previously slowed advances.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

6. Support & Resistance

Zones not lines

Markets rarely respect a single exact number. Think in areas and observe reactions, failed breaks, and retests.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

6. Support & Resistance

Exercise

Mark three support and three resistance zones on a historical chart. Record whether price reacted, broke, or consolidated at each zone.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

7. Trend & Market Structure

Uptrend

A simplified uptrend contains higher highs and higher lows. A downtrend commonly contains lower highs and lower lows.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

7. Trend & Market Structure

Range

A range has repeated reactions between boundaries without a sustained directional sequence.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

7. Trend & Market Structure

Multi-timeframe view

Use a higher timeframe for context and a lower timeframe only if it fits your tested setup. More timeframes do not automatically mean more accuracy.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

7. Trend & Market Structure

Exercise

Classify 20 historical chart sections as uptrend, downtrend, or range. Explain the structural evidence for each.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

8. Volume

What volume tells you

Volume measures trading activity. It can help you assess participation around breakouts, reversals, and consolidations.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

8. Volume

Confirmation

A price move with notable participation may provide useful context, but volume alone does not tell you what to buy or sell.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

8. Volume

Relative volume

Compare current volume with a recent baseline rather than treating one absolute number as meaningful across all instruments.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

8. Volume

Exercise

Find five large price moves and compare their volume with the preceding average. Write what changed and what did not.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

9. Risk Management

Why it comes first

A trading edge is useless if one oversized loss damages the account. Risk management keeps individual outcomes from dominating the entire process.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

9. Risk Management

Fixed-risk idea

Choose a predefined amount or percentage of capital that you are willing to lose if a trade reaches its invalidation point. Keep the rule consistent while learning.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

9. Risk Management

Daily loss limit

A daily loss limit can prevent emotional escalation. If reached, stop trading and review instead of trying to win the money back.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

9. Risk Management

Exercise

For a hypothetical ■50,000 account, compare 0.5%, 1%, and 2% risk per trade. Write the rupee risk and explain why a beginner may prefer conservative sizing.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

10. Stop Loss & Targets

Stop loss

A stop is an exit mechanism intended to limit loss when the trade thesis is invalidated. It is not a guarantee of the exact exit price during fast markets or gaps.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

10. Stop Loss & Targets

Target

A target is an area where the trader plans to reduce or close risk if the expected move occurs.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

10. Stop Loss & Targets

Structure-based placement

A stop can be linked to the point where the setup becomes invalid rather than an arbitrary percentage.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

10. Stop Loss & Targets

Exercise

Take ten historical setups. For each, identify the entry, invalidation level, target area, and the reason for each level before checking the outcome.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

11. Risk-to-Reward

Definition

Risk-to-reward compares potential loss with potential profit. A 1:2 example means the planned reward is twice the planned risk.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

11. Risk-to-Reward

Expectancy

A favorable ratio does not guarantee profitability. A complete evaluation considers win rate, average win, average loss, trading costs, and execution.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

11. Risk-to-Reward

Breakeven concept

Ignoring costs, a 1:1 payoff has a 50% mathematical breakeven win rate. At 1:2, the simple breakeven rate is about 33.3%. Real trading requires a higher edge after costs and imperfect execution.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

11. Risk-to-Reward

Exercise

Create three hypothetical strategies with different win rates and payoff ratios. Calculate which has positive expectancy before costs.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

12. Position Sizing

Core formula

Position Size = Amount Willing to Risk ÷ Risk Per Unit. This converts a risk rule into a quantity.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

12. Position Sizing

Example

If a trader hypothetically risks $\$500$ and the planned loss per share is $\$5$, the theoretical size is 100 shares, subject to lot sizes, costs, liquidity and broker rules.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

12. Position Sizing

Why size changes

A wider stop generally requires a smaller position if risk is fixed. A tighter stop can permit a larger position, but only if the stop is technically meaningful.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

12. Position Sizing

Exercise

Use five different stop distances with the same risk amount. Observe how position size changes.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

13. Building a Setup

Step 1: context

Identify the market condition: trend, range, volatility and important levels.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

13. Building a Setup

Step 2: trigger

Define exactly what must happen before entry—such as a rejection, breakout-retest, or structure change.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

13. Building a Setup

Step 3: invalidation and exit

Define the stop and target before entry. If the setup does not offer acceptable risk, skip it.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

13. Building a Setup

Exercise

Write one setup in objective language. Someone else should be able to read your rules and identify whether a chart qualifies.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

14. Trading Psychology

Common emotions

Fear, greed, FOMO, revenge trading and overconfidence can distort execution.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

14. Trading Psychology

Process over outcome

A disciplined trade can lose. An undisciplined trade can win. Grade the decision against your rules.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

14. Trading Psychology

Useful habits

Use a checklist, predefined risk, scheduled breaks, a journal and a maximum number of trades.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

14. Trading Psychology

Exercise

After each simulated trade, rate discipline from 1–5 and write one emotion you noticed. Look for patterns after 20 trades.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

15. Common Mistakes

Overtrading

More trades do not necessarily mean more opportunity. Trade only when your tested conditions appear.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

15. Common Mistakes

Moving the stop

Moving a stop farther away to avoid accepting a loss changes the risk plan and can turn a small mistake into a large one.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

15. Common Mistakes

Chasing

Entering late because a move looks exciting often worsens the planned risk/reward.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

15. Common Mistakes

Exercise

Create a personal 'Do Not Do' list of ten behaviors that would invalidate your trading plan.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

16. Trading Plan

Market

Specify what instruments and sessions you trade.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

16. Trading Plan

Setup

Specify the exact conditions required before entry.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

16. Trading Plan

Risk

Specify maximum risk per trade, daily loss, and maximum concurrent exposure.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

16. Trading Plan

Review

Specify when you review trades and what metrics you track: win rate, average win/loss, expectancy, drawdown, rule adherence.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

17. Trade Walkthroughs

Example A: support reaction

Context: an established range. Price approaches support. A rejection appears. The trader waits for their predefined confirmation, sets invalidation below the structure, calculates size, and defines an exit.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

17. Trade Walkthroughs

Example B: breakout-retest

Context: repeated resistance. Price breaks and later retests the zone. The trader waits for confirmation rather than buying the first spike.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

17. Trade Walkthroughs

Example C: trend pullback

Context: higher highs and higher lows. Price retraces toward a prior structure area. The trader waits for the tested trigger.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

17. Trade Walkthroughs

Exercise

Replay each example on historical data and record whether the same rules would have produced a trade.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

18. 30-Day Practice Plan

Week 1

Learn terminology, order types, candles, trends, support/resistance and volume. No live trading.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

18. 30-Day Practice Plan

Week 2

Mark historical charts and practice one setup. Record 20–30 examples.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

18. 30-Day Practice Plan

Week 3

Paper trade or simulate. Use fixed hypothetical risk and journal every decision.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

18. 30-Day Practice Plan

Week 4

Calculate statistics, identify rule violations, and refine the plan. Only consider real-money trading if you have adequate knowledge, capital, and risk tolerance.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

19. Trading Checklist

Before entry

Is the market condition clear? Is the setup present? Is the entry defined? Is the invalidation defined? Is position size calculated? Is the risk within limits?

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

19. Trading Checklist

During trade

Do not improvise without a rule. Monitor only the information relevant to the plan.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

19. Trading Checklist

After trade

Record screenshot, reason for entry, risk, result, execution quality, emotion and lesson.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

19. Trading Checklist

Exercise

Print or save the checklist and require yourself to complete it before every simulated trade.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

20. Final Roadmap

Learn

Build foundational knowledge before chasing strategies.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

20. Final Roadmap

Test

Backtest and paper trade a small number of clearly defined setups.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

20. Final Roadmap

Measure

Track results and rule adherence over a meaningful sample.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

20. Final Roadmap

Improve

Change one variable at a time. Protect capital and focus on consistency rather than excitement.

Practice prompt

Write your answer in your own words. The purpose of the exercise is to turn passive reading into an observable skill.

Key takeaway

A good trading process is defined before the trade, not invented after the outcome.

Workbook: Trading Goals

Complete this page repeatedly while practicing. Do not use it as a substitute for a tested strategy.

Bonus: 50 Trading Rules

Use these as reminders—not guarantees.

1. Always define risk before entry.
2. Never trade money needed for essentials.
3. Use a stop or a clearly defined invalidation rule.
4. Do not increase size to recover a loss.
5. Do not chase a fast move.
6. Do not confuse a candle pattern with a complete setup.
7. Respect your daily loss limit.
8. Keep a journal.
9. Review screenshots.
10. Measure rule adherence.
11. Test one setup at a time.
12. Do not change rules after one loss.
13. Account for fees and slippage.
14. Know your broker's order rules.
15. Use conservative leverage or none while learning.
16. Avoid trading when emotionally compromised.
17. Take breaks after a losing streak.
18. Separate market analysis from trade execution.
19. Write your plan before the session.
20. Use objective language.
21. Treat support/resistance as zones.
22. Use context with candlestick patterns.
23. Compare volume with a baseline.
24. Record missed trades too.
25. A missed trade is not a reason to chase.
